According to our (Global Info Research) latest study, the global Cardiopulmonary Autotransfusion System market size was valued at USD 569 million in 2023 and is forecast to a readjusted size of USD 667 million by 2030 with a CAGR of 2.3% during review period.

Cardiopulmonary Autotransfusion System is a sophisticated device with an exceptionally effective design that provides autologous blood during surgical procedures.

Autotransfusion is a process wherein a person receives their own blood for a transfusion, instead of banked allogenic (separate-donor) blood. There are two main kinds of Autotransfusion: Blood can be autologous 'pre-donated' (termed so despite 'donation' not typically referring to giving to one's self) before a surgery, or alternatively, it can be collected during and after the surgery using an intraoperative blood salvage device. The latter form of Autotransfusion is utilized in surgeries where there is expected a large volume blood loss.

The major players in global Cardiopulmonary Autotransfusion System market include Haemonetics, Medtronic, LivaNova, etc. The top 3 players occupy about 70% shares of the global market.
