According to our (Global Info Research) latest study, the global Thin Plastic Carrier Tape market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

There are many types and specifications of electronic components, and there are also many specifications of supporting thin carrier tapes. According to the different raw materials used, thin carrier tapes are mainly divided into paper carrier tapes and plastic carrier tapes. Paper carrier tape has the characteristics of low price and convenient recycling. It will be preferred by electronic component manufacturers. It can be used for the packaging of electronic components with a thickness of no more than 1mm. It is mainly suitable for passive components such as RCL devices (resistors, capacitors, and inductors). Components; when the thickness of electronic components exceeds 1mm, considering the limiting factors such as paper carrier tape bending conditions and thickness, plastic carrier tape is generally used for packaging. Plastic carrier tape is suitable for active components such as integrated circuits and semiconductor products, and passive components with larger thickness.
