Abstracts

The global Thinning Machine market size is expected to reach \$ 1419.1 million by 2029, rising at a market growth of 6.2% CAGR during the forecast period (2023-2029).

Thinning Machine is mainly used for wafer surface processing of material segment and before integrated circuit packaging. The thinning machine removes the substrate material on the back of the wafer by grinding to meet the requirements of chip package thickness and surface roughness, and to improve the heat dissipation effect of the chip. Thinning to a certain thickness is beneficial to the later packaging process. The key players of thinning machines in the world include Disco and Tokyo Precision; their market share is about 75%. Japan and China are the main production areas of thinning machines, accounting for 56.46% and 20.47% respectively. The market share of fully automatic thinning machines accounts for about 68.31%, and the market share of 300mm wafer thinning machines accounts for about 81.44%.

In China market, the key players of Thinning Machine include Disco and TOKYO SEIMITSU, etc. The top two players hold a share over 80%. In terms of product type, Fully Automatic is the largest segment, occupied for a share of about 92%, and in terms of application, 300mm Wafer has a share about 80 percent.
