Thioacetanilide is an organic compound, and its chemical structure contains the position of sulfur atom substituted by Acetyl group and phenylamine. Its chemical formula is C_8H_9NS , and its molecular weight is 151.23 g/mol. Thioacetanilide is a colorless to light yellow crystalline solid that is stable at room temperature. It has a higher solubility in organic solvents and a lower solubility in water. Thioacetaniline has some special chemical properties and applications: organic synthesis intermediates: Thioacetaniline can serve as an intermediate in organic synthesis and participate in different chemical reactions. It can be used to synthesize other compounds, such as drugs, dyes, and pesticides. Metal complexes: Thioacetanilide can form stable complexes with some metal ions. These complexes have potential applications in catalysts, photosensitizers, and material chemistry. Organic photochemistry: Thioacetaniline can serve as a photosensitive substance in photochemical reactions. It can absorb specific wavelengths of light and participate in photochemical reactions, such as photopolymerization and photolysis. Other applications: Thioacetanilide may also have applications in other fields, such as pharmaceuticals, dye industry, and organic synthesis.
