Abstracts

The global Thioether Antioxidants market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Thioether Antioxidants is special thioether auxiliary antioxidants, good long-term heat resistance. It is usually used in combination with phenolic antioxidants and provides significant long-term thermal stability to the polymer. It can show significant synergistic effects on long-term thermal stability especially at high temperatures. Compared to conventional sulfur ethers such as DLTDP or DSTDP, they are effective at low load levels due to their higher sulfur content. Exhibit very low volatility, excellent polymer resistance to extraction, and excellent polymer retention due to high molecular weight. It is effective even in polymers used under harsh conditions such as high temperatures or contact with hot water.

This report studies the global Thioether Antioxidants production, demand, key manufacturers, and key regions.
