Copper cathode trade refers to international trade activities with copper cathode (Copper Cathode) as the main trading product. Copper cathode is a high-purity copper product that has been processed by electrolytic refining and other processes. It usually exists in the form of thin plates or squares. This copper product has a wide range of applications in electrical engineering, electronics, construction, transportation and other fields. Trade in copper cathodes often involves a complex network between producing countries, exporters, importers and end-users. Producing countries are usually copper-producing areas, which are converted into cathode copper through processes such as mining, extraction, and refining. These copper cathode products are then exported to other countries and sold through international trade. Importers can be copper processing companies, manufacturers or other industries that ultimately use cathode copper to produce various copper products.
