Abstracts

According to our (Global Info Research) latest study, the global Thiuram Accelerator market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Thiuram Accelerators are very fast and effective sulfur cure accelerators. They can be used for all common unsaturated rubbers including NR, IR, SBR, BR, and NBR. Like some sulfenamides, most thiurams have two or more sulfur atoms in the sulfur bridge. These compounds not only function as accelerators but also act as sulfur donors, i.e. allow for "sulfur-less" cure. They are often used in systems with low or no sulfur content and for rubbers with low unsaturation like IIR and EPDM. Often metal oxides are added which bind the released dithiocarbamic acid and prevent accelerated oxidative degradation.
