The global Thixotropes market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Thixotropes belongs to the isothermal tautomeric system of gel and sol. Thixotropic gum with thixotropic, only mechanical force, without heating can make the gel into sol. Do not need cooling, only need to stand for a certain time, and from sol to gel. Thixotropes is often used as a stabilizer in suspension, which can make the particles dispersed stably in the medium and not easy to aggregate and settle.

This report studies the global Thixotropes production, demand, key manufacturers, and key regions.
