According to our (Global Info Research) latest study, the global Thoracic Aortic Stent Graft market size was valued at USD 674.9 million in 2023 and is forecast to a readjusted size of USD 839 million by 2030 with a CAGR of 3.2% during review period.

Thoracic aortic stent implantation is another method of treating descending aortic aneurysms, ulcers, fistulas and other diseases. It is also used to treat bacterial aneurysms, traumatic aortic rupture, aortic dissection, etc. After strict imaging examination screening, this surgical method can be safe, minimally invasive and effective in the treatment of the above diseases. However, for long atherosclerotic aneurysms, lesions close to aortic branch vessels, and aortic dissection, stent implantation may have certain technical difficulties, such as endoleakage, stent migration or improper placement, and aortic dissection. Malignant events such as perforation and vascular trauma.

The global prevalence of aortic disease is on the rise, and the thoracic aorta is one of the most common sites of aortic disease. Therefore, the market demand for thoracic aortic stent grafting is also increasing with the rising prevalence of aortic disease.

Thoracic aortic stent transplantation technology continues to develop, and stents of different types and materials, including aortic covered stents, bare stents, etc., continue to emerge, providing more options for surgery. At the same time, the continuous improvement and popularization of surgical techniques have also improved surgical results.
