In medical surgery, when an organ or tissue of the human body is defective, ancient medical techniques may use some tissue materials similar to human tissue to stop repair. At present, there are various repair materials on the market, including thoracic surgery repair membrane. The repair film made from this type of material has excellent performance, and this type of product may play a role in cutting off and strengthening the damaged parts of the tissue; May play a preventive role in preventing tissue leakage, splitting, hernias, and scarring; The product has good Histocompatibility and biocompatibility; This type of product has good mechanical properties, which may meet the requirements of clinical medicine for tensile strength and flexibility, and may be closely sutured with the patient's tissue. In addition, these products are sterile packaged, and the information in the packaging is missing ?- The punishment for sterilization and disposal of radiation can be indirectly utilized without stopping the sterilization and disinfection treatment when it is in use.

Thoracic surgical repair membrane is widely used in many occasions by clinical experts of various disciplines due to its good biocompatibility, high stability, biomechanical compliance, and excellent performance in inducing defect tissue regeneration.
