According to our (Global Info Research) latest study, the global Thread-Cutting Tool market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

A thread-cutting tool is a machining tool capable of processing female threads through helical interpolation using a machining center or an NC milling machine. The processing machine must, therefore, be capable of helical interpolation.

Unlike ordinary taps, milling in machining offers low cutting resistance and a reduced risk of breakage. Even in the unlikely event of breakage, the tool can be easily removed. Various thread diameters can be processed by altering the program, provided the thread pitch remains the same.
