## Abstracts

The global Thread-Cutting Tool market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

A thread-cutting tool is a machining tool capable of processing female threads through helical interpolation using a machining center or an NC milling machine. The processing machine must, therefore, be capable of helical interpolation.

Unlike ordinary taps, milling in machining offers low cutting resistance and a reduced risk of breakage. Even in the unlikely event of breakage, the tool can be easily removed. Various thread diameters can be processed by altering the program, provided the thread pitch remains the same.

This report studies the global Thread-Cutting Tool production, demand, key manufacturers, and key regions.
