Abstracts

The global Thread Forming Rolling Dies market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Thread Forming Rolling Dies are tools used to form threads on metal workpieces. They are commonly used to make threaded bolts, nuts and other threaded connections. Thread Forming Rolling Dies uses a cold working method that applies pressure and rotational motion between the metal workpiece and the mold, causing the metal material to plastically deform under the action of the mold to form the required thread shape. Compared to cutting tools, thread forming rolling dies can produce high-quality threads quickly and efficiently.

The design of Thread Forming Rolling Dies is usually based on factors such as workpiece material, thread specifications and product requirements. They are made of carbide or high-speed steel and have wear resistance and high strength to withstand large rolling pressures. Widely used in manufacturing, especially in industries such as automotive, aerospace, machinery and electronic equipment.

This report studies the global Thread Forming Rolling Dies production, demand, key manufacturers, and key regions.
