Abstracts

The global Thread Overlock Sewing Machine market size is expected to reach $ 1856 million by 2032, rising at a market growth of 6.8% CAGR during the forecast period (2026-2032).

In 2025, global Thread Overlock Sewing Machine approximately 1,923,780 units, with an average global market price of around US$ 615 per unit. Gross margin is about 32%. The cost is 418 USD. The Production is about 1,923,780 units. A Thread Overlock Sewing Machine is a specialized industrial sewing machine used in the textile and apparel industry. It forms overlock stitches using multiple threads (typically 2?5 threads) to seam, edge, and prevent fabric fraying, enhancing both durability and appearance. It is widely used in garment manufacturing, knitwear, and industrial textile applications.

Thread Overlock Sewing Machines are continuously evolving toward higher speed and greater efficiency, with increasing operating speeds (typically 6000?9000 RPM) to support large-scale, continuous apparel and knitwear production while reducing unit manufacturing costs. In the context of accelerating industrial production cycles, overall machine performance is being optimized for higher throughput and improved operational stability.

In addition, the equipment is rapidly advancing toward intelligence and enhanced material adaptability, with the integration of electronic control systems enabling automatic thread trimming, tension adjustment, and intelligent monitoring functions. Meanwhile, growing demand for functional fabrics and high-end apparel is driving improvements in handling elastic, multi-layer, and complex materials, pushing the industry toward digitalization and flexible manufacturing.
