The global Thread Sucking Machine market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Thread sucking machine is a machine mainly used in garment manufacturing and textile industry. Its function is to suck off the thread ends on the surface of the fabric, making the fabric more smooth and tidy, and improving quality and efficiency. The machine uses suction to remove lint from the surface of the fabric, resulting in a smooth and clean surface for beautiful clothing and other fabric items. The machine usually consists of a suction device and a roller. One of the rollers is placed above the fabric while the other is placed below it, and the rollers help to stretch the fabric smoothly as it passes over them. Similarly, the aspirator will also use suction to remove thread ends from the surface of the fabric in order to manufacture higher quality fabrics.
