## Abstracts

The global Threaded Pinch Valve market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The thread pinch valve includes the core component inner bushing, valve body and two casing caps. The pinch valve body consists of a main body and two nip rings which are inserted into the ends and are sealed between the O-rings and the body body respectively. In the VMP series pneumatic pinch valve body, the pinch valve sleeve is centered and pressed towards the ends by means of two sleeve covers, thus forming a compact unit. Applicable medium for internal thread pinch valve: cement, silo, sand, mineral material, limestone, soil, marl, mortar, ore slurry, etc. Pinch valves are suitable for use in a wide variety of pneumatic conveying systems in areas such as cement silos, pigment and granule handling, the ceramics, glass and plastics industry, sewage treatment, the pharmaceutical industry, the food industry and winemaking. In addition, pinch valves are widely used in dosing and weighing systems, powder coating equipment, vacuum toilet systems, vacuum conveying systems, suction and compressed air control systems.
