The global Threading Service market size is expected to reach \$ 2077 million by 2032, rising at a market growth of 4.5% CAGR during the forecast period (2026-2032).

Thread machining services refer to customized machining services for mechanical parts, connectors, pipe fittings, valves, oil and gas well pipes, medical devices, aerospace fasteners, automotive parts, and various custom industrial components. These services are provided by professional machining service providers according to customer drawings, samples, or technical specifications. Through processes such as CNC tapping, thread milling, thread turning, thread rolling, thread grinding, pipe thread turning, and API/OCTG connection thread machining, internal threads, external threads, standard threads, non-standard threads, precision threads, and high-strength rolled threads are created on metal, alloy, engineering plastic, or composite material parts.

From a demand structure perspective, general industrial machinery, automotive parts, hydraulic and pneumatic systems, valves and pipe fittings, and custom equipment parts constitute the basic demand, while the aerospace, medical device, and oil and gas industries provide higher value-added demand. The aerospace and defense sectors focus on fatigue life, material strength, and traceability of rolled threads; the medical sector prioritizes micro-threads, surface quality, and material compliance; and the oil and gas sector focuses on API standards, premium connections, sealing performance, and field repair efficiency. Regarding regional supply chains, European and American customers tend to retain local or nearshore processing capabilities for critical components, while outsourcing general prototypes, small-batch parts, and cost-sensitive components to regions like China, Southeast Asia, and India. This has resulted in a dual-track structure in the industry: high-end localization, general parts globalization.

This report studies the global Threading Service demand, key companies, and key regions.
