According to our (Global Info Research) latest study, the global Three-cylinder Motorcycle market size was valued at US\$ 2583 million in 2025 and is forecast to a readjusted size of US\$ 3610 million by 2032 with a CAGR of 4.9% during review period.

A three-cylinder motorcycle (triple-cylinder motorcycle) is a type of motorcycle powered by an internal combustion engine with three cylinders arranged typically in an inline (inline-3) configuration. It combines characteristics of both twin-cylinder and four-cylinder engines, offering a balance between torque delivery, smoothness, and high-revving performance. Three-cylinder engines are known for their strong mid-range torque, linear power output, and distinctive exhaust sound. They are commonly used in naked bikes, sport motorcycles, and adventure touring models, where manufacturers aim to achieve a compromise between performance, weight, and rideability.

In 2025, global production of three-cylinder motorcycles reached 251,000 units, with an average price of \$10,000 and a gross profit margin between 15% and 25%. European brands had slightly higher gross profit margins than other brands.
