Three Dimensional Electric Rotary Stage is an electric device that can accurately rotate and position in three directions. It usually consists of an electric drive mechanism, a motion control system, and a rotating platform. The electric rotary table can achieve rotational motion around the X, Y, and Z axes, enabling precise positioning and rotation of objects or workpieces in three-dimensional space. Its range of motion and resolution can vary depending on specific models and application requirements, and can achieve precision at the micron or submicron level. This type of electric rotary table is widely used in multiple fields and applications, including but not limited to the following aspects: laboratory research: In scientific research and laboratory applications, three-dimensional electric rotary tables are often used in fields such as precision positioning, optical measurement, material characterization, and optical device testing. It can be used to adjust the angle of optical components, position samples or equipment, and perform various precision measurements and experimental operations. Optical system: In optical systems, a three-dimensional electric rotary table is often used to accurately orient and adjust the beam of light. It can be used for beam shaping, beam alignment, positioning and alignment of optical devices, as well as debugging and optimization of optical systems. Manufacturing and processing: In the field of manufacturing and processing, three-dimensional electric rotary tables can be used for precision positioning, part processing, assembly, and inspection. It can be used to locate

workpieces, adjust machining angles, and achieve complex machining paths and motion trajectories. Display technology: In display technology, a three-dimensional electric rotary table can be used to adjust the angle and direction of the display screen or projection device to achieve the best viewing angle and display effect. Automation system: In automation systems, three-dimensional electric rotary tables can be used for precise positioning and rotation of robots, sensors, or other devices to achieve precise operations and task completion.
