According to our (Global Info Research) latest study, the global Three-path Diode Power Sensors market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

Three-path diode power sensors are advanced measurement devices used to accurately measure RF and microwave power levels over a wide dynamic range. These sensors use three separate detection paths, each optimized for different power ranges: low, medium, and high. By combining the outputs from these three paths, the sensor can achieve high precision across a broad range of input power levels without the need for manual range switching. This design enhances measurement speed, accuracy, and linearity, making three-path diode power sensors ideal for applications in telecommunications, radar systems, and other RF power monitoring scenarios.
