Abstracts

According to our (Global Info Research) latest study, the global Three-phase Asynchronous Motor for Metallurgical Hoisting market size was valued at US\$ 896 million in 2025 and is forecast to a readjusted size of US\$ 1462 million by 2032 with a CAGR of 7.2% during review period.

In 2025, global sales of three-phase asynchronous motors for metallurgical hoisting reached 150,000 units, with an average selling price of US\$5,800 per unit. These motors are high-power motors specifically designed for the metallurgical industry, primarily used to drive lifting equipment, smelting furnaces, conveyors, and other high-load metallurgical machinery. They can operate stably under high temperature, high load, and harsh working environments. These motors use three-phase alternating current and generate a rotating magnetic field through the interaction of the stator windings and rotor structure, featuring high starting torque, strong lifting capacity, high working efficiency, and robust structure. The industry's total production capacity is approximately 180,000 units per year, with an average gross profit margin of approximately 26%. Upstream raw materials mainly include silicon steel sheets, copper wire, aluminum alloys, and motor housings; downstream supply comes from metallurgical equipment manufacturers and crane manufacturers, with smelting and steel production accounting for 50% of downstream consumption. Future development lies in improving the motor's high-temperature resistance and durability, and promoting the application of intelligent and remote monitoring technologies to enhance equipment automation and safety. As the metallurgical industry's demand for energy efficiency and production automation grows, the market for metallurgical crane motors will continue to expand, and companies with technological innovation and high-quality production capabilities will gain a larger market share.
