The global Three-phase Combined Overvoltage Protector market size is expected to reach \$ 508 million by 2032, rising at a market growth of 2.1% CAGR during the forecast period (2026-2032).

The three-phase combined overvoltage protector is an overvoltage protection device that integrates three-phase protection modules into one, and can monitor and protect three-phase power lines at the same time. When the power grid causes instantaneous high voltage due to lightning strikes, operating overvoltage, induced overvoltage, etc., the device can act quickly to discharge the overvoltage energy to the ground to protect electrical equipment from damage.
