Abstracts

The global Three-phase Disc Centrifuge market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The three-phase disc centrifuge can only separate materials containing fine particles, and the solid content should not be too high, generally less than 3%, usually about 1% solid content is better.

The three-phase disc centrifuge is a special equipment for three-phase separation with high speed, stability, airtightness, high efficiency and automatic slag discharge. It has two liquid discharge ports and one slag discharge port, which can separate two kinds of liquids with different specific gravity. Solid phase materials can also be discharged.
