According to our (Global Info Research) latest study, the global Three-Phase Electronic Energy Meter market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Three-phase electronic energy meter is an energy metering device used to measure and record three-phase energy consumption. It uses electronic technology and digital display technology to have accurate electric energy measurement and metering functions. Compared with single-phase electric energy meters, the main difference between three-phase electric energy meters is that it is suitable for three-phase power grid systems and can measure and meter three-phase electric energy at the same time. Three-phase electric energy meters usually have the following characteristics: 1. Three-phase measurement: Three-phase electric energy meters can simultaneously measure and measure the consumption of three-phase electric energy, including three-phase voltage, current, power, power factor and other parameters. 2. High-precision measurement: The three-phase electric energy meter adopts advanced electronic technology and has high-precision electric energy measurement function, which can accurately record and measure electric energy consumption. 3. Multi-function display: Three-phase energy meters usually have a digital display that can display parameters such as energy consumption, power factor, voltage, and current, making it convenient for users to monitor and manage in real time. 4. Data storage and communication functions: Three-phase electric energy meters usually have data storage and communication interfaces, which can store electric energy data in the internal memory and conduct data transmission and management with the host computer or data acquisition system through the communication interface. 5. Remote meter reading and control: The three-phase electric energy meter can realize remote

meter reading and control functions through the communication interface, making it convenient for users to conduct remote monitoring and management.
