Abstracts

The global Three-Phase Electronic Prepaid Energy Meter market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Compared with the previous two years, the performance and service life of meter electronic components have steadily improved, and the product quality, functions, service life, and reliability of prepaid energy meters have been significantly improved. At present, the opinions of various regional power system management departments on accepting electromechanical/fully electronic prepaid energy meters are gradually softening. In particular, the demand for fully electronic single- and three-phase series prepaid energy meters is gradually increasing. At the same time, as the power management departments of various regions increase the implementation of time-of-use electricity pricing policies, the use of new multi-rate prepaid meters has begun. Whether a meter product meets the actual needs of the power system management department and specific users, the final test criterion is time and the user's recognition of the meter. I believe that whether it is an electromechanical integrated prepaid energy meter using a long-life mechanical energy meter as the meter, or a fully electronic prepaid energy meter as the energy metering instrument, the prepayment collection management method will play an important role in the future power metering management. Lieutenant General will continue to play an important role!

A three-phase energy meter is an watt-hour meter used to measure the electrical energy output by a power supply (or consumed by a load) in a three-phase AC circuit. Its working principle is exactly the same as that of a single-phase electricity meter, except that its structure uses multiple sets of driving components and multiple aluminum disks fixed on the rotating shaft to achieve the measurement of three-phase electrical

energy. The three-phase electronic prepaid energy meter adopts special integrated circuit and microprocessor technology and modular design. It has the characteristics of low power consumption, accurate measurement, stable performance, convenient installation and easy maintenance. It can be combined with water meters produced by our company, Gas meter and heat meter realize one card.
