The global Three Phase Over Voltage Protector market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Three-phase over voltage protector is a multi-functional three-phase three-wire power supply system or a monitoring and protection instrument for three-phase electrical equipment. It integrates three-phase voltage display, overvoltage protection, undervoltage protection, phase loss protection (phase failure protection), three-phase voltage unbalance protection, and phase sequence protection (wrong phase protection). It can be used to monitor the important parameters (voltage, phase sequence, phase loss, phase balance) in the three-phase power supply system, and can send an alarm signal in time for the abnormal situation of the three-phase power supply that may endanger the safe and reliable operation of the power supply system and equipment, so that the control The system can properly deal with the machinery and equipment before they suffer greater damage, so that the machinery, equipment and system can be protected to the greatest extent, the effectiveness of the machine, equipment and system can be improved, and the maintenance cost and maintenance cost caused by the failure of the three-phase system can be reduced. Maintenance time.
