## Abstracts

The global Three-phase Shielded Isolation Transformer market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The structure of the three-phase shielded isolation transformer is similar to that of an ordinary transformer, but it adds a shielding winding to isolate the input and output ends. At the same time, because it uses the three-phase AC input and output, it has higher power and efficiency and can meet the power supply needs of large industrial equipment. It can improve the stability and reliability of the equipment and ensure the long-term effective operation of the equipment.

The three-phase shielded isolation transformer is a commonly used power transformer, mainly used to isolate or suppress interference signals to ensure the stable operation of equipment.
