The three-phase string grid-connected photovoltaic inverter is a device used in solar photovoltaic power generation systems. It is mainly used to convert the DC power generated by photovoltaic panels into AC power and integrate it into the power grid. It connects multiple photovoltaic panels in series and parallel to form a battery pack, then inputs the DC power of this battery pack into the inverter for conversion, and finally integrates the converted AC power into the power grid. The three-phase string grid-connected photovoltaic inverter has the following characteristics: 1. High efficiency: The inverter adopts advanced circuit design and control algorithm, which can efficiently convert the DC power generated by the solar photovoltaic panels into AC power and convert it into AC power. It is integrated into the grid. 2. High reliability: The inverter uses high-quality electronic components and materials, has good stability and reliability, and can work normally under various environmental conditions. 3. Easy to install and maintain: The inverter has a simple structure and is easy to install. It also has complete protection and monitoring functions and can monitor and manage the system in real time. 4. With communication interface: The inverter has an RS485 communication interface, which can carry out data communication with the monitoring system to monitor and manage the operating status of the system. The three-phase string grid-connected photovoltaic inverter is suitable for large-scale commercial and industrial photovoltaic power generation systems. It is characterized by large output power, stable voltage, and can meet the requirements of large power grids. It can efficiently combine

the electric energy generated by the solar photovoltaic power generation system. Integrate into the power grid to realize the utilization and power supply of clean energy.
