Three-Phase Vacuum Recloser is a switchgear for medium-voltage distribution networks. It is designed for three-phase systems and can quickly detect line faults and perform automatic disconnection and reclosing functions to maintain power supply continuity and system safety. Its core technology is based on a vacuum interrupter, which uses vacuum as an arc extinguishing medium. It has the characteristics of excellent arc extinguishing performance, high mechanical durability and environmental friendliness. Three-phase reclosers are usually equipped with intelligent control units that support functions such as fault location, protection setting, remote monitoring and data recording, which can significantly improve the automation level and operation efficiency of the distribution network.
