Three-Piece High Pressure Ball Valve is a high-performance valve, including two valve body flanges and a middle section containing a ball. The ball is a key component of the valve. It is opened and closed by rotating around the center line of the valve body, and the valve is unblocked or blocked by rotating the valve stem. The three-piece high-pressure ball valve has the characteristics of high reliability, small flow resistance, long service life, and full opening and closing. It is widely used in occasions that require high-pressure fluid control, such as oil, natural gas and other high-pressure transmission pipelines.
