Abstracts

The global Three-Point Linkage market size is expected to reach \$ 593.8 million by 2029, rising at a market growth of 5.9% CAGR during the forecast period (2023-2029).

Global key players of Three-Point Linkage include Bobcat Company, Deere & Company and CBM Spa etc. The top three players hold a share over 40%. Europe is the largest market, has a share about 45%. In terms of product type, Category 0-2 is the largest segment, occupied for a share of 80%, and in terms of application, Agricultural has a share about 85 percent.

The three-point linkage (also referred to as three-point hitch) is a type of hitch for attaching plows and other implements to either an industrial or agricultural tractor.

A three-point linkage looks like a triangle. It attaches the implement to the tractor. Once the implement is attached, it is fixed in place with respect to the tractor and the arm position of the hitch.

The primary benefit of the three-point linkage system is to transfer the weight and resistance of an implement to the tractor's drive wheels. This gives the tractor more traction than it would otherwise have, given the same weight, power, and fuel consumption.
