Abstracts

The global Three-pole Turnstile market size is expected to reach $ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

The three-pole gate is a common access control device, commonly found in public transportation places such as subway stations and bus stations, and is used to manage the entry and exit of passengers. It usually consists of three horizontal gate poles. When passengers pass through, the gate will automatically open to allow passengers to pass, while in the absence of authorization, the gate will remain closed. When used in conjunction with automatic ticket vending machines, after purchasing tickets, passengers usually need to pass through a three-bar gate to enter the platform or get on the train. Passengers swipe the ticket in front of the gate or insert the ticket into the card reader. The system will identify the validity of the ticket. If the ticket is valid, the gate will open and the passenger can pass; if the ticket is invalid or expired, the gate will not open and the passenger will Need to be dealt with separately. The combination of the three-bar gate and the automatic ticket vending machine can effectively manage the entry and exit of passengers, ensuring that only passengers with valid tickets can enter the platform or get on the bus, which improves the safety and efficiency of the transportation system.
