According to our (Global Info Research) latest study, the global Three-Quadrant Triac market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

A three-quadrant triac (TRIAC) is an electronic device used for power control in AC circuits. It controls the flow of AC power, allowing current to flow in both directions. TRIAC can be turned on during both the positive and negative half cycles, so it can be used to control the power of the AC power supply. It is commonly used in applications such as dimmer switches, speed controls for power tools, heating controls, and more. A TRIAC usually consists of two thyristors (SCRs) but can conduct current in both directions.
