Three-roller roller benders are specialized machines designed for bending metal pipes, tubes, bars, or beams into precise curves and circular shapes. They use three rollers, arranged in a triangular configuration, with the two lower rollers fixed and the upper roller adjustable to apply pressure to the workpiece. The material is fed through the rollers repeatedly to achieve the desired curvature, with adjustments made to the upper roller for varying bending radii. Available in manual, hydraulic, and CNC-controlled models, three-roller roller benders are widely used in industries like construction, automotive, and metal fabrication for creating arches, rings, and structural components with high precision and efficiency.
