## Abstracts

The global Three-side Sealing Packaging Machine market size is expected to reach \$ 5271 million by 2032, rising at a market growth of 11.5% CAGR during the forecast period (2026-2032).

In 2025, global sales of three-side sealing packaging machines reached 189,000 units, with an average selling price of US\$12,600 per unit. Global production capacity reached 243,000 units, and the industry's average gross profit margin remained between 29% and 36%. Three-side sealing packaging machines are automated devices that achieve packaging bag forming and sealing through three-sided heat sealing technology. Relying on a PLC control system that integrates temperature, speed, and tension parameters, they complete film forming, material filling, and sealing/cutting in one integrated operation, suitable for packaging granules, powders, liquids, and other materials. Upstream raw materials mainly consist of servo motors, PLC controllers, stainless steel frames, and heat sealing components; the midstream forms a supply chain of 'component suppliers - equipment manufacturers - distributors,' with leading companies dominating the high-end market and domestic companies occupying the mid-to-low-end; downstream consumption is concentrated in the food and beverage, pharmaceutical packaging, daily chemical products, and chemical product sectors. Demand continues to grow, driven by the demand for pre-prepared meals, ready-to-eat foods, and aseptic packaging for pharmaceuticals. Intelligentization and environmental protection have become core demands. Business opportunities are concentrated in the integration of intelligent monitoring and remote diagnostic modules, the research and development of equipment adapted to biodegradable materials, and exports to emerging markets. The future lies in integrating industrial internet and AI technologies to improve the flexible production capabilities of equipment, optimize energy-saving and consumption-reducing designs, promote modular upgrades and domestic substitution,

and align with the global trend of automation and green transformation in manufacturing.
