According to our (Global Info Research) latest study, the global Therapeutic Plasma Exchange market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Plasma exchange is a procedure that separates and removes plasma from the blood in order to eliminate a disease substance circulating in the plasma. The red blood cells, white blood cells, and platelets are returned to the patient, along with a prescribed replacement fluid. Plasma exchange is widely performed in the treatment of various chronic diseases as first line or as second line of therapy or as a supportive treatment.

Therapeutic plasma exchange (TPE) has wide applications in the treatment of neurological, renal, hematological, and metabolic disorders. The indications for using therapeutic plasma exchange procedures as a line of treatment are regulated through guidelines provided by the American Society for Apheresis (ASFA). It categorizes the indications in four parts: category I to IV. Category I and II depict TPE as first or second line of treatment for many neurological, renal, and hematological disorders such as chronic inflammatory demyelinating polyneuropathy (CIDP), myasthenia gravis, Guillain-Barre syndrome, and thrombotic thrombocytopenic purpura (TTP).
