Abstracts

Thromboelastography (TEG) is a method of testing the efficiency of blood coagulation. It is a test mainly used in surgery and anesthesiology, although increasingly used in resuscitations in Emergency Departments, intensive care units, and labor and delivery suites. More common tests of blood coagulation include prothrombin time (PT) and partial thromboplastin time (aPTT) which measure coagulation factor function, but TEG also can assess platelet function, clot strength, and fibrinolysis which these other tests cannot.

Thromboelastography Analyzer provides rapid, comprehensive and accurate identification of an individual's hemostasis condition in a laboratory or point-of-care setting.

This report studies the global Thromboelastography Hemostasis Analyzers production, demand, key manufacturers, and key regions.
