A throttle body in a motorcycle is a component of the fuel injection system that controls how much air enters the engine. It is the modern equivalent of a carburetor, but it works with sensors and the ECU (Engine Control Unit) for precise air-fuel mixture regulation.

In 2024, global Throttle Body for Motorcycles sales reached approximately 50800 k Units, with an average market price of around 45 USD/Unit.

The motorcycle throttle body market is experiencing steady growth, driven by stricter emission regulations, rising demand for fuel efficiency, and the shift from carburetors to electronic fuel injection (EFI) systems, especially in emerging markets. Technological advancements such as ride-by-wire control, integrated sensors, and lightweight materials are enhancing performance, improving throttle response, and enabling compliance with Euro 5 and similar standards. Additionally, the growing popularity of premium motorcycles and the expansion of electric two-wheelers with throttle control systems are further boosting market adoption.
