The global Through-Hole Metal Film Resistors market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A through-hole resistor is a fixed resistor with long, flexible leads that can be snapped into a breadboard or soldered into a printed circuit board (PCB) by hand or using a wave soldering process. Through-hole resistors, also known as leaded resistors, are used to reduce current flow within a circuit. Through-hole metal film resistors are a type of resistor in which a thin metal film is used to form the resistance value. This type of resistor is widely used in electronic circuits and circuit boards for functions such as limiting current, regulating voltage, and measuring resistance value.
