The global Through Hole Mount DIP Switches market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Through Hole Mount DIP Switches are electronic components used for plug-in installation of circuit boards. They are a type of dual in-line switch used to select circuit options or adjust circuit parameters.

The main features of Through Hole Mount DIP Switches are:

Dual-column arrangement: Like other DIP switches, Through Hole Mount DIP Switches are dual-column arrangements, with each switch having a set of pins that correspond to holes on the circuit board.

Adjustable options: By turning specific switches on or off, different circuit options can be selected or circuit parameters adjusted. They usually have individual switches that can be set manually or operated with tools.

Through Hole Mount DIP Switches are mainly used for circuit functions that need to be manually set or adjusted, such as selecting different working modes, setting addresses, switch configurations, etc. They are widely used in computer hardware, communication equipment, household appliances, industrial control and other fields. Due to the nature of cartridge installation, Through Hole Mount DIP Switches can easily change the switch state, while providing stable connection and reliable performance.
