The global Through Hole Mount Low Dropout Regulator market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A through-hole mount low dropout voltage regulator is a method of mounting a voltage regulator on a circuit board and using through-holes to connect different layers on the circuit board to provide a stable voltage on the circuit board. A voltage regulator is an electronic component that converts an unstable power supply voltage into a stable voltage to ensure the normal operation of the circuit. A low dropout voltage regulator is a special type of voltage regulator that can maintain a very small voltage difference between the input and output voltages, usually less than 0.5 volts, to provide a more stable and reliable power supply. Through-hole mount low dropout voltage regulators are often used in circuit boards that require high precision and reliability, such as computers, communication equipment, medical equipment, etc.
