Abstracts

According to our (Global Info Research) latest study, the global Through Hole Mount NTC Thermistors market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Through-hole mounting NTC thermistor refers to an installation method in which the NTC thermistor device is connected to the circuit board through a through hole (that is, a metal hole on the circuit board). Compared with the surface mount NTC thermistor, this installation method needs to insert the resistance device into the through hole of the circuit board and fix it by soldering. Through-hole mounted NTC thermistor is characterized by simple structure and reliable installation method, which is suitable for occasions where the installation environment is relatively harsh or the circuit board structure does not allow the use of surface mount. Since NTC thermistor devices are usually relatively small, special tools are required for installation to ensure the accuracy and stability of the resistor device.
