Abstracts

The global Through Hole Mount NTC Thermistors market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Through-hole mounting NTC thermistor refers to an installation method in which the NTC thermistor device is connected to the circuit board through a through hole (that is, a metal hole on the circuit board). Compared with the surface mount NTC thermistor, this installation method needs to insert the resistance device into the through hole of the circuit board and fix it by soldering. Through-hole mounted NTC thermistor is characterized by simple structure and reliable installation method, which is suitable for occasions where the installation environment is relatively harsh or the circuit board structure does not allow the use of surface mount. Since NTC thermistor devices are usually relatively small, special tools are required for installation to ensure the accuracy and stability of the resistor device.
