Through Hole Mount Signal Relays are a type of electronic relay that features a through hole pin design in order to secure it to a printed circuit board (PCB) using through hole mounting techniques. Through Hole Mount Signal Relays are usually used in low power and low current applications, such as signal transmission, control circuits, communication equipment and automation systems, etc. They perform critical switching and signaling functions in electronic devices. The pin design of the through-hole mount signal relay allows it to be fixed on the PCB by inserting the pins into the holes on the PCB. Pins are usually metallic materials such as copper or steel, and can have specific shapes and spacing to fit standard PCB layouts. Through the through-hole mounting technology, a reliable electrical connection is established between the signal relay and the PCB through the contact between the pins and the PCB. This mounting method ensures a firm fixation and reliable signal transmission.
