## Abstracts

According to our (Global Info Research) latest study, the global Through Hole Wirewound Resistors market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

A through-hole wirewound resistor is a type of resistor characterized by a through-hole structure formed by winding a resistive material around an insulating material with good electrical conductivity. The resistance value of the resistor is adjusted by factors such as the number of turns of the winding, the diameter of the wire, and the material. Through-hole wirewound resistors usually have an insulating material as a supporting structure, and the resistive material is wound on the insulating material by winding or printing techniques to form one or more winding rings. The winding rings are connected through connectors or through holes to form a circuit of resistors.
