According to our (Global Info Research) latest study, the global Thrust Reversal System market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Thrust reversal, also called reverse thrust, is the temporary diversion of an aircraft engine's thrust so that it is directed forward, rather than backward. Reverse thrust acts against the forward travel of the aircraft, providing deceleration. Thrust reverser systems are featured on many jet aircraft to help slow down just after touch-down, reducing wear on the brakes and enabling shorter landing distances.

North America is expected to be a leading thrust reversal system market during the forecast period due to the high demand for new aircraft and replacement of aging fleets. The Asia Pacific region is expected to be the fastest-growing region due to increase in modernization programs in the Asia Pacific aviation industry. These factors are anticipated to further propel the demand for thrust reversal systems in the APAC region.
