Abstracts

The global Thrust Reverser market size is expected to reach \$ 3147 million by 2032, rising at a market growth of 4.9% CAGR during the forecast period (2026-2032).

A thrust reverser is a device used on aircraft to redirect the engine's thrust forward rather than backward, helping to slow down the aircraft after landing. It improves deceleration, reduces wear on brakes, and enhances safety, especially during wet or short runway landings. Thrust reversers are typically integrated into jet engine nacelles.

North America and Europe are the most producers and consumers, both hold a share about 90%. Global Thrust Reverser key players include Safran Nacelle, Spirit AeroSystems, Nexcelle and Collins Aerospace. Global top four players hold a share over 70%.

This report studies the global Thrust Reverser production, demand, key manufacturers, and key regions.
