Abstracts

The global Thruster Brakes market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Thruster brakes are fail-safe brakes that are spring applied and use an electrohydraulic thruster to hold the brake open. When supplied power, the thruster piston rod extends and the brake is released. If the thruster is turned off or power is lost, the piston rod retracts and the spring engages the brake.
