According to our (Global Info Research) latest study, the global THT Rotary Coded Switches market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

THT Rotary Coded Switches, also known as Through-Hole Technology Rotary Coded Switches, are electronic components that provide a means for positional control or input selection. Unlike SMT Rotary Encoding Switches, THT Rotary Coded Switches are designed for mounting onto PCBs using through-hole technology. These switches have a rotary design that allows for easy adjustment of positions or selection of options by rotating the switch. They are commonly used in various industries, including consumer electronics, automotive, telecommunications, and industrial equipment. THT Rotary Coded Switches offer reliable and cost-effective solutions for menu navigation, parameter selection, and control functions, making them a crucial component in electronic devices and systems.

The market prospect for THT Rotary Coded Switches is still substantial but gradually declining. As surface-mount technology (SMT) gains popularity, the demand for through-hole technology (THT) components, including THT Rotary Coded Switches, has slightly decreased. However, certain industries and applications continue to rely on THT technology for specific requirements, such as higher current ratings or mechanical stability. These switches are widely used in automotive, telecommunications, industrial equipment, and other sectors that prioritize durability and reliability. While the overall market may experience a slight decline, there is still a significant demand for THT Rotary Coded Switches in niche markets, particularly where through-hole mounting capabilities are necessary.
