The global Thymopentin for Injection market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Thymopentin for injection is an immunomodulatory drug, which has the functions of inducing T cell differentiation, promoting the development, maturation and activation of T lymphocyte subsets, and can regulate the proportion of T lymphocyte subsets to make them tend to normal. In the body, Thymopentin promotes the differentiation of T cells by increasing the level of cAMP, and binds to the specific receptor of T cells to increase the level of GMP in the cells, thereby inducing a series of intracellular reactions and regulating the immune function of the body. It is a two-way immunomodulator with wide application, significant curative effect, high safety and relatively low price. Compared with similar products, it has obvious advantages in terms of use, curative effect, safety, indications, compatibility and price, and has huge clinical applications. value and potential. It can enhance the immune function of the body and is used for tumors, infections, hepatitis and various immunodeficiency diseases; it can make the disordered immune function tend to be normal, and it can be used for autoimmune diseases caused by abnormal immune function of the body (such as rheumatoid arthritis, systemic lupus erythematosus, etc.).
